Practice 2-E:

1. <u>Requests</u>. The most famous http library written by kenneth reitz. It's a must have for every python developer. (import request as rq)
2. <u>Scrapy</u>. If you are involved in webscraping then this is a must have library for you. After using this library you won't use any other.(import scrapy as sc)
3. <u>wxPython</u>. A gui toolkit for python. I have primarily used it in place of tkinter. You will really love it.(import wxpythin as wx)
4. <u>Pillow</u>. A friendly fork of PIL (Python Imaging Library). It is more user friendly than PIL and is a must have for anyone who works with images.(import pillow as plo)
5. <u>SQLAlchemy</u>. A database library. Many love it and many hate it. The choice is yours.(import sqlalchemy as sql)
